

## 2018 AUSTRALIAN BEEF CATTLE REGISTRATIONS

For the 2018 year beef cattle registrations totalled **147,293**. This was 6,395 registrations higher than in 2017.

The composition of registrations by breed group in 2018 was as follows:

Breed Group	2018 Registrations	% of registrations
a. British breeds & Australian derivatives	82,028	55.7
b. Tropical breeds	31,603	21.5
c. European breeds & other derivatives	20,333	14.1
d. Other breeds	12,961	8.8
<b>Total</b>	<b>147,293</b>

## STATISTICS ON SECONDARY REGISTERS OF RECORDED CATTLE

In 1998 it was agreed that ARCBA publish “secondary registers” of animals involved in the seedstock industry.

The criteria for inclusion in the secondary registers are:

**Secondary** recording registers – include animals that are bred for seedstock production and recorded by a beef breed society but excluding animals entered in the Society’s herdbook.

**Seedstock production** – means the production of bulls for use in the registered and commercial cattle sectors.

These include formal registers such as the Angus Performance Register in which Angus cattle are recorded in this nominated register, are able to be recorded in GROUP BREEDPLAN and have pedigree certificates issued. There are other less formal registers which include the progeny of registered parents which can be performance recorded and contribute to seedstock production. In compiling these statistics:

- i) steer numbers have been excluded, and
- ii) cows of one breed that are used in an upgrading program for another breed (eg Hereford base cows used in a Simmental upgrading program) have been excluded.

Table 4 shows the number of cattle included in secondary registers over the last fourteen years. The number of cattle in these registers are substantial and have been increasing marginally over time ie from 58,072 in 1996 to 66,234 in 2002 (a 14% increase) but fell back to 62,110 in 2003 due, in part, to the drought influence. The rise in 2004 was largely due to the activity of Wagyu in getting secondary register animals on file for BREEDPLAN evaluation. In recent years secondary register cattle numbers have ranged from 58,000 to 64,000 except for a significant decline in 2010, reflecting continuing drought conditions.

In Table 5, the number of cattle in primary registers (ie Herdbook cattle) and the number in secondary registers have been combined to help in following trends by breed groups.

In the period 1995 to 2004 the percentage of seedstock cattle recorded in primary registers fell progressively from 72% to about 67%. This, combined with the decline in overall recording activity, meant that breed society income from registrations was tending to shrink because breeders pay more for primary register cattle than secondary register cattle. However, in 2005 there was a significant reversal of the trend with primary register cattle increasing by 9.9% on the year previously and secondary register cattle decreasing by 8.7%. Since 2005 the ratio of primary to secondary register cattle has been fairly stable at around 70% primary to 30% secondary, with a relative increase in primary register cattle evident in 2010 and a decrease in 2014 and 2015.

<b>Percentages in:</b>	<b>2005</b>	<b>2006</b>	<b>2007</b>	<b>2008</b>	<b>2009</b>	<b>2010</b>	<b>2011</b>	<b>2012</b>	<b>2013</b>	<b>2014</b>	<b>2015</b>	<b>2016</b>	<b>2017</b>	<b>2018</b>

## STATISTICS ON EXPORT ANIMALS

Strong interest from a range of countries seeking to import live cattle from Australia for breeding purposes led to the Australian Cattle Genetics Export Agency (ACGEA) drafting “Australian Beef Cattle Genetics Export Standards”.

Under these Standards, Category 2 heifers, which are the bulk of the cattle exported, are:

- Sired by registered purebred bulls in a single or multiple-sire mating group,
- The dam is generally not registered,
- Heifers are required to meet breed standards for true-to-type and structural soundness.

These heifers are recorded onto breed society databases and export certificates are produced. They are intended to be used for breeding in imported countries.

A smaller number of Category 1 animals (3 generation pedigree on sire and dam) are also certified and exported.

The number of registered cattle produced in these categories has increased over time as more breeds provide export standards and these standards are used in more importing countries.

Following are the statistics of the cattle certified by the International Livestock Resources and Information Centre (ILRIC) under the ACGEA Standards from 2008 to 2017:

	<u>2008</u>	<u>2009</u>	<u>2010</u>	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>	<u>2016</u>	<u>2017</u>	<u>2018</u>
